

An introduction to irrationality and transcendence methods.

Michel Waldschmidt

Table of Content ¹

Contents

1 Historical introduction to irrationality	1
1.1 Early history	1
1.1.1 Simple proofs of irrationality	1
1.1.2 History of irrationality	8
1.2 Variation on a proof by Fourier (1815)	10
1.2.1 Irrationality of e	11
1.2.2 The number e is not quadratic	11
1.2.3 Irrationality of $e^{\sqrt{2}}$	13
1.2.4 The number e^2 is not quadratic	14
1.2.5 The number $e^{\sqrt{3}}$ is irrational	15
1.2.6 Is-it possible to go further?	15
1.2.7 A geometrical proof of the irrationality of e	15
1.3 Irrationality Criteria	16
1.3.1 First criterion	17
1.3.2 Proof of Dirichlet's Theorem	17
1.3.3 Irrationality of at least one number	20
1.3.4 Hurwitz Theorem	21
1.3.5 A criterion for linear independence	30
2 Historical introduction to transcendence	40
2.1 Introduction to Hermite's work	41
2.1.1 Irrationality of e^r for $r \in \mathbb{Q}$: sketch of proof	42
2.1.2 First introduction to Hermite's proof	43
2.1.3 Second introduction to Hermite's proof	46
2.1.4 Irrationality of e^r : end of the proof	52
2.1.5 Irrationality of π	52
2.2 Transcendence of e , following Hermite	53
2.2.1 Padé approximants	53

¹ <http://www.math.jussieu.fr/~miw/articles/pdf/AWSabstract.pdf>

2.2.2	Hermite's proof of the transcendence of e	54
2.3	Transcendental numbers: historical survey	61
2.3.1	Diophantine Approximation: historical survey	61
2.3.2	Transcendental numbers after Liouville and before 1900: Cantor, Hermite, Lindemann, Weierstraß	67
2.3.3	Hilbert's seventh problem: Gel'fond, Schneider, Baker	68
2.3.4	The Six Exponentials Theorem	68
2.3.5	Algebraic independence of the values of the exponential function	69
3	Elliptic functions and transcendence	72
3.1	Introduction to elliptic functions	72
3.1.1	The exponential function	72
3.1.2	Basic concepts	73
3.1.3	Morphisms between elliptic curves. The modular invariant	74
3.1.4	Endomorphisms of an elliptic curve; complex multiplications	75
3.1.5	Standard relations among Gamma values	78
3.1.6	Quasi-periods of elliptic curves and elliptic integrals of the second kind	79
3.1.7	Elliptic integrals	81
3.2	Transcendence results of numbers related with elliptic functions	81
3.2.1	Elliptic analog of Lindemann's Theorem on the transcen- dence of π and of Hermite-Lindemann Theorem on the transcendence of $\log \alpha$	81
3.2.2	Elliptic analogs of the Six Exponentials Theorem	85
3.2.3	Linear independence of numbers related with elliptic func- tions	86
3.2.4	Linear independence of periods and quasi-periods	86
3.2.5	Elliptic analog of Baker's Theorem	87
3.2.6	Further results of linear independence	88
3.3	Algebraic independence of numbers related with elliptic functions	89
3.3.1	Small transcendence degree	89
3.3.2	Algebraic independence of periods and quasi-periods	90
3.3.3	Large transcendence degree	92
3.3.4	Modular functions and Ramanujan functions	93
3.3.5	Mahler-Manin problem on $J(q)$	94
3.3.6	Nesterenko's Theorem	97
4	Auxiliary functions in transcendence proofs	100
4.1	Explicit functions	101
4.1.1	Liouville	101
4.1.2	Continued fractions	101
4.1.3	Hermite	101
4.1.4	Padé approximation	101
4.1.5	Hypergeometric methods	101
4.2	Interpolation methods	102

4.2.1	Weierstraß question	102
4.2.2	Integer valued entire functions	102
4.2.3	Newton interpolation	102
4.2.4	Lagrange interpolation	102
4.3	Auxiliary functions arising from the Dirichlet's box principle	103
4.3.1	The origin of the Thue–Siegel lemma	103
4.3.2	Thue–Siegel lemma and consequences	103
4.3.3	Siegel, Gel'fond, Schneider	103
4.3.4	Schneider–Lang Criterion	103
4.3.5	Higher dimension: extension to several variables	103
4.3.6	Modular functions	103
4.3.7	Universal auxiliary functions	103
4.3.8	Mahler's method	103
4.4	Interpolation determinants	104
4.4.1	Lehmer's problem	104
4.4.2	Laurent's interpolation determinants	105
4.5	Bost slope inequalities, Arakelov's Theory	105
5	Conjectures and open problems	107
5.1	Schanuel's Conjecture and some consequences	107
5.2	Multiple Zeta Values	114
5.3	Gamma, Elliptic, Modular, G and E -Functions	116
5.4	Fibonacci and Miscellanea	122
5.5	Diophantine Approximation	125
5.6	The <i>abc</i> Conjecture	125
5.7	Irrationality and linear independence measures	126
5.8	Expansions of irrational algebraic numbers	129
5.9	Logarithms of algebraic numbers	130
