III. Diagrammatics for Soergel categories

Using relations we can **deform** diagrams

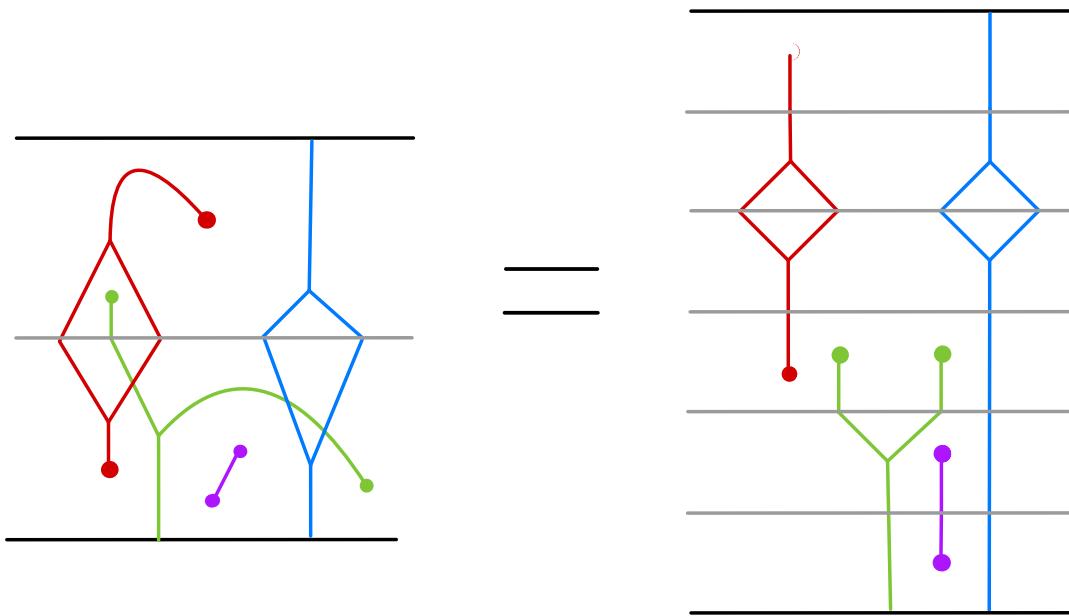

III. Diagrammatics for Soergel categories

Using relations we can **deform** diagrams and **decompose** them into some "elementary pieces":

III. Diagrammatics for Soergel categories

Using relations we can **deform** diagrams and **decompose** them into some "elementary pieces":

We can describe the diagrammatic category $S\mathcal{C}$, by **generators** and **relations**

III. 1. The diagrammatic category $\mathcal{D}\mathcal{C}_1$

We construct a category $\mathcal{D}\mathcal{C}_1$ of diagrams via generators and local relations by associating a colored graph to each morphism in $\mathcal{S}\mathcal{C}_1$:

$$\mathcal{D}\mathcal{C}_1 \xrightarrow{F_1} \mathcal{S}\mathcal{C}_1$$

III. 1. The diagrammatic category $\mathcal{D}\mathcal{C}_1$

We construct a category $\mathcal{D}\mathcal{C}_1$ of diagrams via generators and local relations by associating a colored graph to each morphism in $\mathcal{S}\mathcal{C}_1$:

$$\begin{array}{ccc} \mathcal{D}\mathcal{C}_1 & \xrightarrow{F_1} & \mathcal{S}\mathcal{C}_1 \\ \downarrow \oplus, (-)^{\text{sh}} & & \downarrow \oplus, (-)^{\text{sh}} \\ \mathcal{D}\mathcal{C}_2 & \xrightarrow{F_2} & \mathcal{S}\mathcal{C}_2 \\ \downarrow \text{Kar}(-) & & \downarrow \text{Kar}(-) \\ \mathcal{D}\mathcal{C} & \xrightarrow{F} & \mathcal{S}\mathcal{C} \end{array}$$

F_1 is an equivalence of categories and induces equivalences F_2 and F .

III. 1. The diagrammatic category D_6 .

Fix an integer $n \in \mathbb{Z}$

Objects finite sequences of indices taken from $\{1, \dots, n\}$

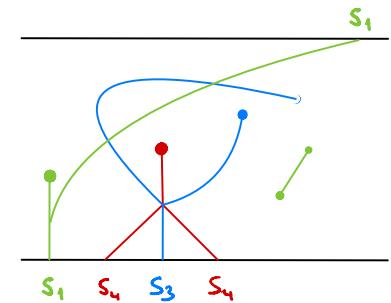

III. 1. The diagrammatic category $D\mathcal{C}_1$

Fix an integer $n \in \mathbb{Z}$

Objects finite sequences of indices taken from $\{1, \dots, n\}$

→ we represent them by colored points in \mathbb{R}

→ color convention: red and blue represent adjacent indices and green is distant to both of them

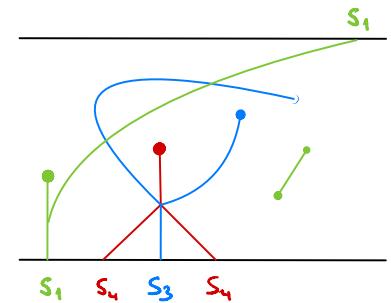

III. 1. The diagrammatic category DG_1

Fix an integer $n \in \mathbb{Z}$

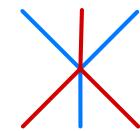

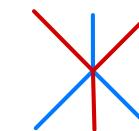

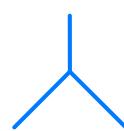

Objects finite sequences of indices taken from $\{1, \dots, n\}$

→ we represent them by colored points in \mathbb{R}

→ color convention: red and blue represent adjacent indices and green is distant to both of them

Generators

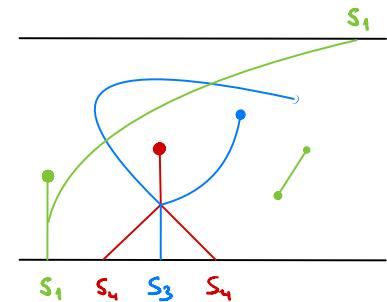

III. 1. The diagrammatic category $D\mathcal{G}_1$

Fix an integer $n \in \mathbb{Z}$

Objects finite sequences of indices taken from $\{1, \dots, n\}$

→ we represent them by colored points in \mathbb{R}

→ color convention: red and blue represent adjacent indices and green is distant to both of them

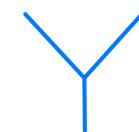

Generators

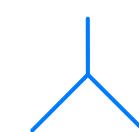

$i \rightarrow \phi$

$\phi \rightarrow i$

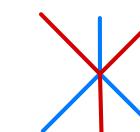

$i \rightarrow ii$

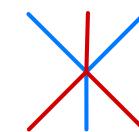

$ii \rightarrow i$

$ij \rightarrow ji$

$i(i+1)i \rightarrow (i+1)ii(i+1)$

$(i+1)ii(i+1) \rightarrow i(i+1)i$

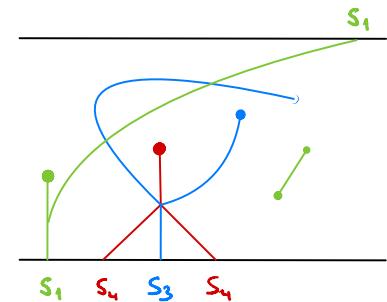

III. 1. The diagrammatic category DG_1

Fix an integer $n \in \mathbb{Z}$

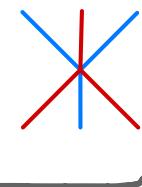

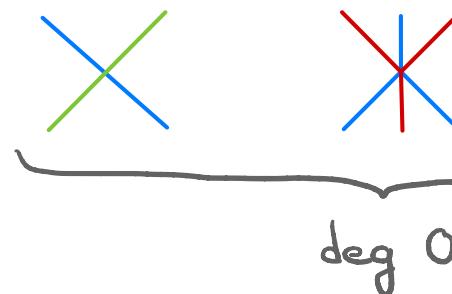

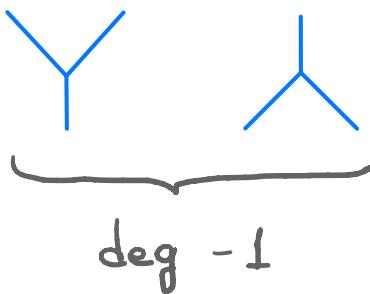

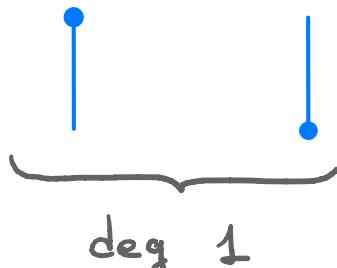

Objects finite sequences of indices taken from $\{1, \dots, n\}$

→ we represent them by colored points in \mathbb{R}

→ color convention: red and blue represent adjacent indices and green is distant to both of them

Generators

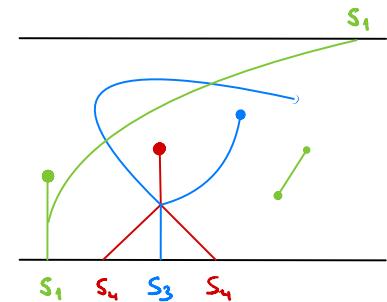

III. 1. The diagrammatic category DG_1

Fix an integer $n \in \mathbb{Z}$

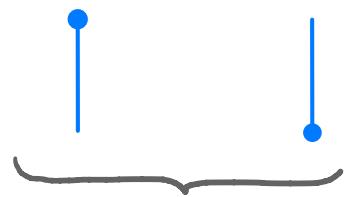

Objects finite sequences of indices taken from $\{1, \dots, n\}$

→ we represent them by colored points in \mathbb{R}

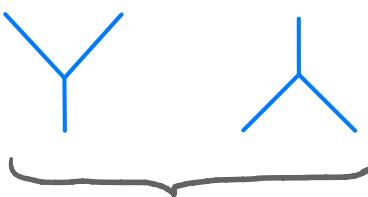

→ color convention: red and blue represent adjacent indices and green is distant to both of them

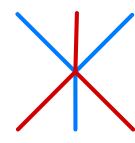

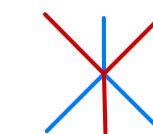

Generators

deg 1

deg -1

deg 0

↳ **Shorthands**:

$$\begin{array}{ccc} \text{Y-shape} & =: & \text{U-shape} \\ \phi \rightarrow ii & & \end{array}$$

$$\begin{array}{ccc} \text{Y-shape} & =: & \text{S-shape} \\ ii \rightarrow \phi & & \rightsquigarrow \text{deg 0} \end{array}$$

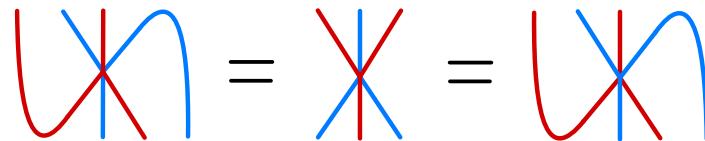

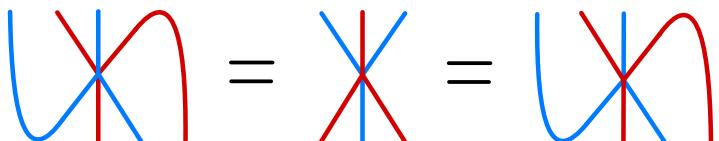

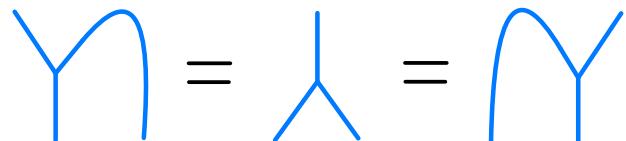

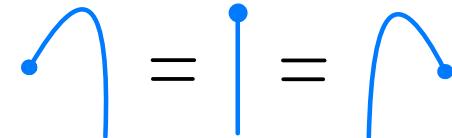

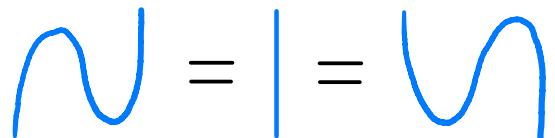

III. 1. The diagrammatic category $D\mathcal{C}_1$

Relations

III. 1. The diagrammatic category D_6 .

Relations

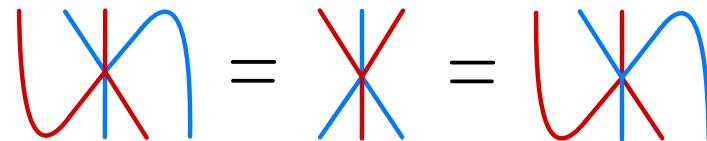

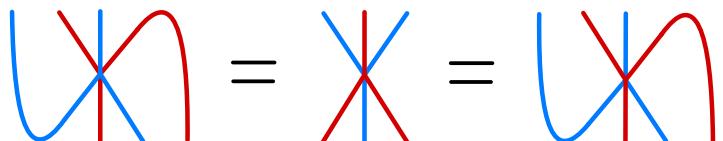

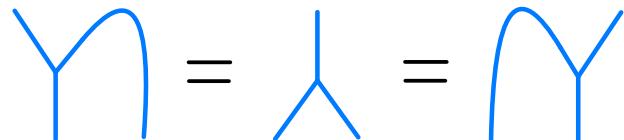

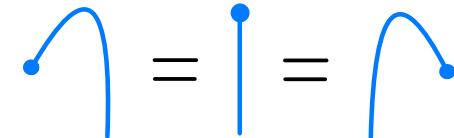

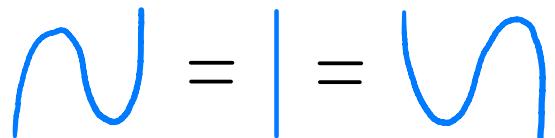

* Isotopy relations

III. 1. The diagrammatic category D_6 .

Relations

* Isotopy relations

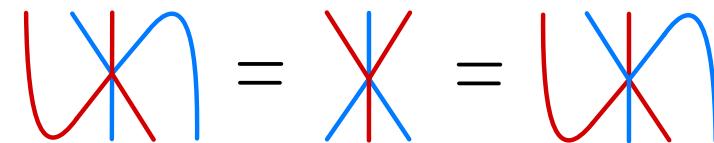

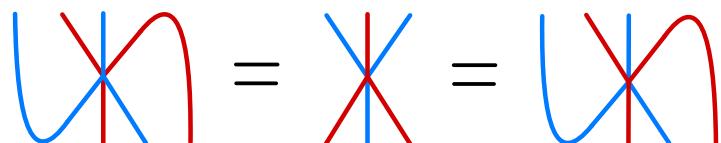

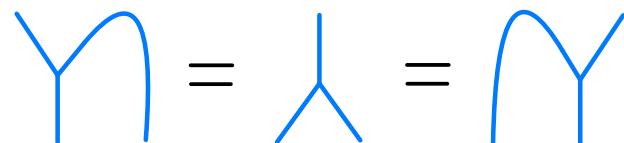

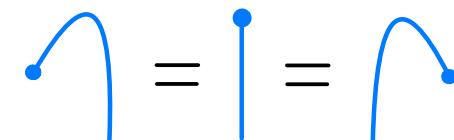

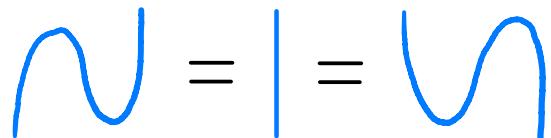

The morphism represented by a particular graph is independent of the isotopy class of the embedding.

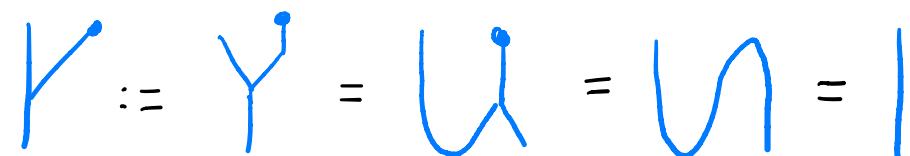

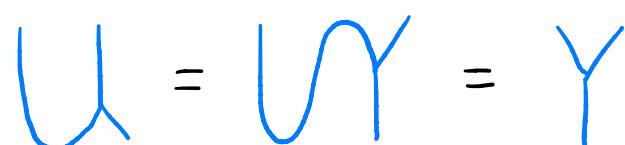

III. 1. The diagrammatic category DG_1

Relations

* Isotopy relations

The morphism represented by a particular graph is independent of the isotopy class of the embedding.

III. 1. The diagrammatic category D_6 .

Relations

* One color relations

$$\begin{array}{c} \diagup \\ \diagdown \end{array} = \begin{array}{c} \diagdown \\ \diagup \end{array}$$

$$\begin{array}{c} \circ \\ | \end{array} = 0$$

$$\begin{array}{c} \bullet \\ | \end{array} + \begin{array}{c} \bullet \\ | \end{array} = 2 \begin{array}{c} \bullet \\ | \end{array}$$

III. 1. The diagrammatic category D_6 .

Relations

* One color relations

- * The image of F_1 lies in $\mathcal{S}\mathcal{B}_1$
- * F_1 is a functor
- * F_1 is fully faithful

III. 2. The functor $F_i : \mathcal{D}\mathcal{B}_i \longrightarrow \mathcal{S}\mathcal{B}_i$

Proposition Let \mathcal{F} be the family of morphisms of $\mathcal{S}\mathcal{B}_i$, consisting of:

- (i) the identity of each object;
- (ii) the generating morphism $R \rightarrow B_i$;
- (iii) isomorphisms yielding the Hecke algebra relations, and the projections to and inclusions from each summand in those relations;
- (iv) the unit and counit of adjunction that make B_i into a self-adjoint bimodule.

Then $\mathcal{S}\mathcal{B}_i$ is monoidally generated (over the left action of R) by \mathcal{F}

III. 2. The functor $F_1 : \mathcal{D}\mathcal{B}_1 \longrightarrow \mathcal{S}\mathcal{B}_1$

Proposition Let \mathcal{F} be the family of morphisms of $\mathcal{S}\mathcal{B}_1$, consisting of:

- (i) the identity of each object;
- (ii) the generating morphism $R \rightarrow B_i$;
- (iii) isomorphisms yielding the Hecke algebra relations, and the projections to and inclusions from each summand in those relations;
- (iv) the unit and counit of adjunction that make B_i into a self-adjoint bimodule.

Then $\mathcal{S}\mathcal{B}_1$ is monoidally generated (over the left action of R) by \mathcal{F}

Reduction of graphs \leadsto classification of homomorphisms in $\mathcal{D}\mathcal{B}_1$

\Rightarrow morphisms (i) - (iv) are in the image of F_1

$\Rightarrow F_1$ is full

III. 2. The functor $F_i : \mathcal{D}\mathcal{B}_i \longrightarrow \mathcal{S}\mathcal{B}_i$

Proposition For $i \in \{1, \dots, n\}$, the object s_i is self-adjoint in $\mathcal{D}\mathcal{B}_i$, i.e.,

$$\text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{w}, \underline{k} s_i) \cong \text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{w} s_i, \underline{k}) \quad \forall \underline{w}, \underline{k} \in \langle s_1, \dots, s_n \rangle$$

$$\text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{w}, s_i \underline{k}) \cong \text{Hom}_{\mathcal{D}\mathcal{B}_i}(s_i \underline{w}, \underline{k})$$

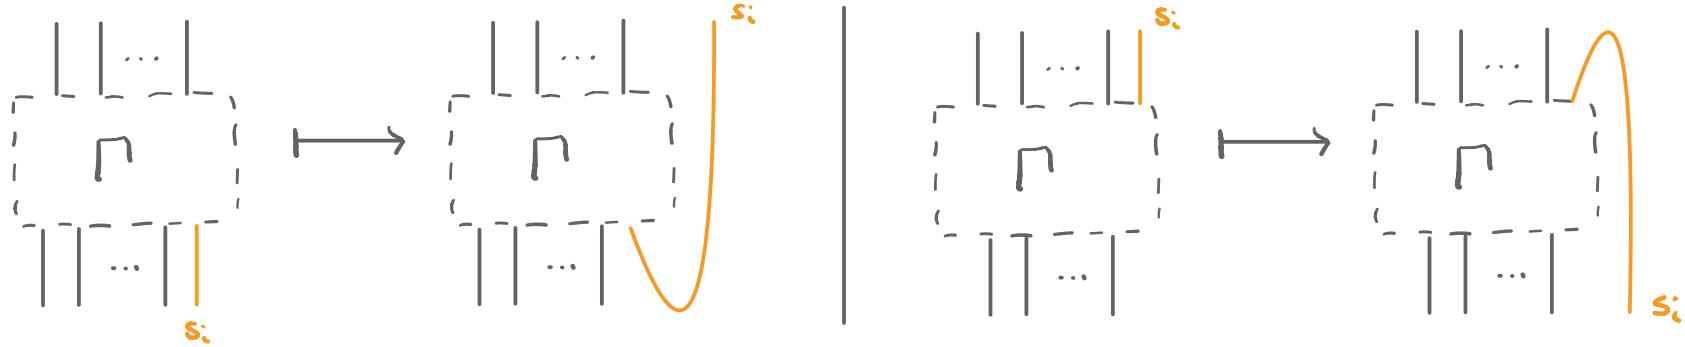

III. 2. The functor $F_i : \mathcal{D}\mathcal{B}_i \rightarrow \mathcal{S}\mathcal{B}_i$

Proposition For $i \in \{1, \dots, n\}$, the object s_i is self-adjoint in \mathcal{B}_i , i.e.,

$$\text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{\omega}, \underline{\kappa} s_i) \cong \text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{\omega} s_i, \underline{\kappa}) \quad \forall \underline{\omega}, \underline{\kappa} \in \langle s_1, \dots, s_n \rangle$$

$$\text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{\omega}, s_i \underline{\kappa}) \cong \text{Hom}_{\mathcal{D}\mathcal{B}_i}(s_i \underline{\omega}, \underline{\kappa})$$

Proof

$$(b_{\underline{\omega}}, b_{\underline{\kappa}}) = \text{gr } K \text{ Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{\omega}, \underline{\kappa})$$

- * each b_i is self-adjoint
- * compatible with relations

III. 2. The functor $F_1 : \mathcal{D}\mathcal{B}_1 \longrightarrow \mathcal{S}\mathcal{B}_1$

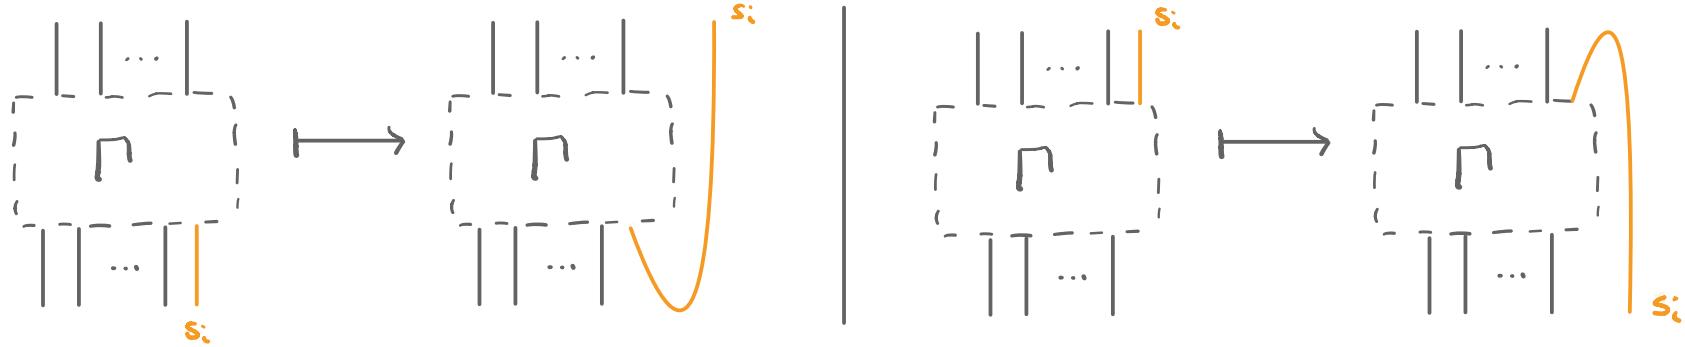

Proposition For $i \in \{1, \dots, n\}$, the object s_i is self-adjoint in \mathcal{B}_i , i.e.,

$$\text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{\omega}, \underline{K} s_i) \cong \text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{\omega} s_i, \underline{K})$$

$$\forall \underline{\omega}, \underline{K} \in \langle s_1, \dots, s_n \rangle$$

$$\text{Hom}_{\mathcal{D}\mathcal{B}_i}(\underline{\omega}, s_i \underline{K}) \cong \text{Hom}_{\mathcal{D}\mathcal{B}_i}(s_i \underline{\omega}, \underline{K})$$

Proof

$$(\mathbf{b}_{\underline{\omega}}, \mathbf{b}_{\underline{K}}) = \text{grK } \text{Hom}_{\mathcal{D}\mathcal{B}_1}(\underline{\omega}, \underline{K}) \quad \left| \begin{array}{l} * \text{ each } \mathcal{B}_i \text{ is self-adjoint} \\ * \text{ compatible with relations} \end{array} \right.$$

~ it induces the standard form on H

$$\Rightarrow \text{grK } \text{Hom}_{\mathcal{D}\mathcal{B}_1}(\underline{\omega}, \underline{K}) = \text{grK } \text{Hom}_{\mathcal{S}\mathcal{B}_1}(\text{BS}(\underline{\omega}), \text{BS}(\underline{K})) \Rightarrow F_1 \text{ is faithful}$$
